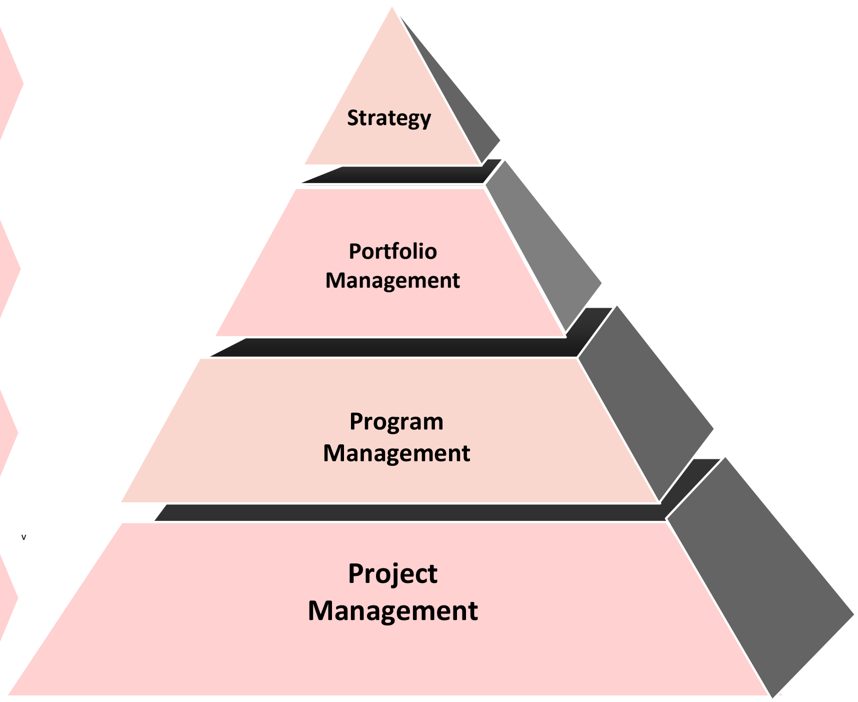
EDGE – ELGI IT & Digital Governance Excellence

December 2025

Integrated Delivery Approach



Level	Purpose	Focus Area	Illustration
Strategy	Defines long-term direction and goals.	*Set the vision and priorities* • Identify strategic goals • Define value outcomes • Establish success metrics	***Why****-Accelerating Core Digitization and Stabilization*
Portfolio	Group of programs and projects managed together.	*Doing the right Things* • Align investments to strategy • Govern and prioritize initiatives • Allocate funding and resources effectively	***What-Core Standardization (ERP, CRM & PLM)***
Program	Related projects managed in an integrated way.	*Delivering the benefits* • Coordinate across projects • Integrate outcomes • Optimize shared resources • Realize measurable value	***How****-ERP Expansion and Modernization Program*
Project	Temporary effort to deliver a defined outcome.	*Doing the things Right* • Manage scope, time, cost, quality • Deliver tangible outputs • Mitigate risks and track progress	***Execution****- America Region ERP implementation, Finance Automation, Data Migration, Mobility Apps*

Integrating Strategy, Portfolio, Program, and Project levels creates alignment, clarity of purpose, measurable results, and effective governance for delivery success.

What constitutes a Project?

Threshold cutoff

Steady-state operations

Project

Non – Project
(High effort operations)

Effort & Budget *(from low to high)*

A Project...

- *Is a temporary endeavor with a defined start and end*
- *Meets a time, cost, and effort threshold*
- *Has a specific scope, objectives, and deliverables*
- *Requires committed resources and active management*
- *Involves planning, execution, monitoring and closure*

Examples

New application development/ integration	Data migration from on-prem infrastructure to cloud	Setting up a 3P supplier management framework

Project Classification

Defining Small and Large Projects

ASPECT	SMALL PROJECTS	LARGE PROJECTS
Definition	Minor enhancements or fixes with limited scope, handled by small teams using a Hybrid approach for faster, flexible delivery	Major initiatives with high complexity, multiple teams, and significant impact, managed through formal governance using a structured Waterfall approach
Effort Range	5 - 40 Man-days	> 40 Man-days
Monthly Budget	<= INR 10 Lakhs [1]	> INR 10 Lakhs
Characteristics	• Limited scope and complexity • Impacts a single system or small user group • Fast turnaround (*few days to few weeks*) • Low cross-functional involvement	• High complexity, scale, and cross-functional impact • Involves multiple systems and business units • Long duration (*several months to over a year*) • Requires significant resources and budget • Demands formal project mgmt. and governance
Examples	• Minor feature enhancements • Configuration changes • Small software updates/patches • Lightweight internal apps	• Full system redesign • Enterprise software rollout • Cloud migration • Large-scale automation • M&A IT integrations

[1] ***Note**: Assumes two resources working on the project at an hourly bill rate of ~INR 3,000. The budget can also correspond to HW/SW cost up to INR 10 Lakhs*

Project Management – Guiding Principles

Embedding SPEED as the Foundation of Project Management

S **SPECIFIC & MEASURABLE**	*Clear objectives with measurable outcomes.*
P **PROCESS DOCUMENTATION**	Document the business process to ensure clarity, consistency, and alignment.
E **EXECUTIVE ALIGNMENT**	*Leadership buy-in and strategic alignment.*
E **EXECUTION AND RESOURCES**	*Drive delivery through cross-collaboration and shared expertise*
D **DATA AND DOCUMENTATION**	Ensure data readiness and build a knowledge base by documenting change.

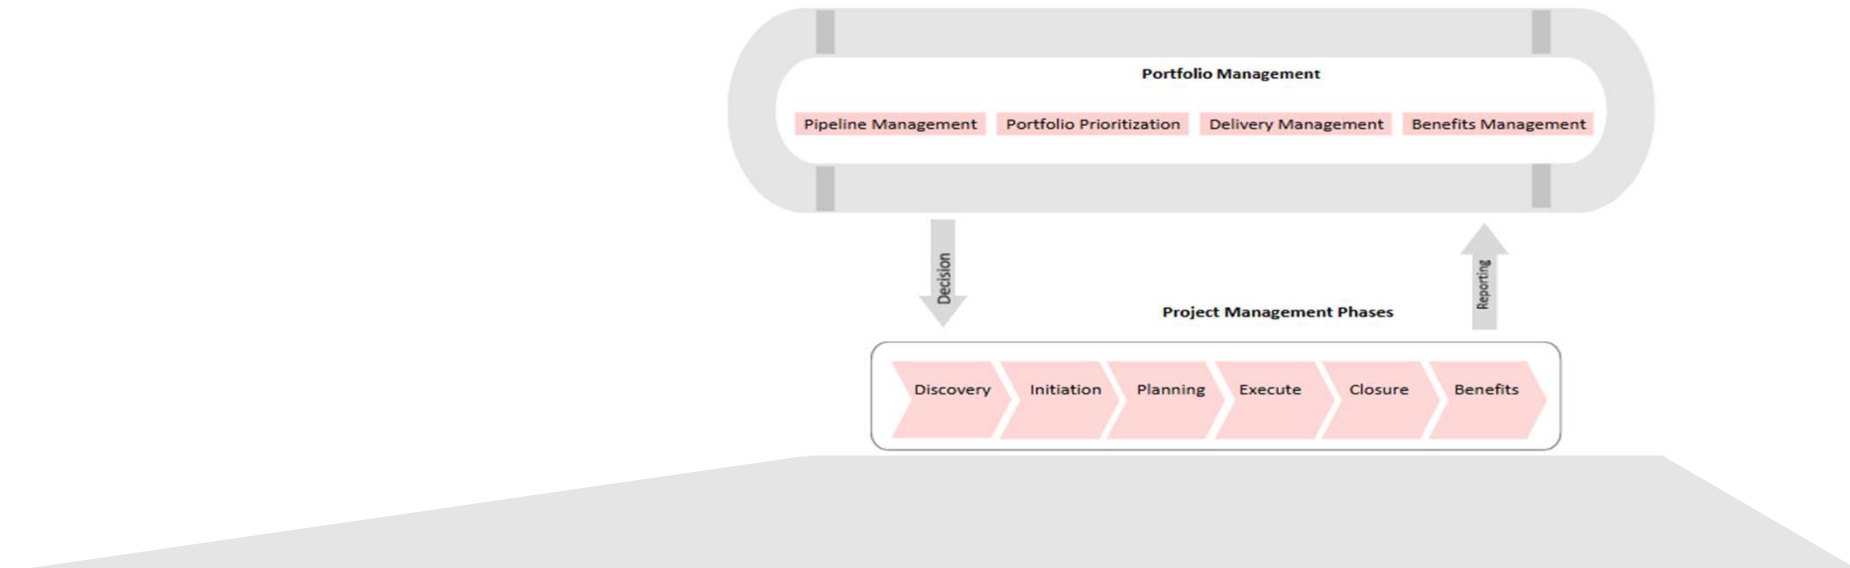
Project Management – Phases



DISCOVERY
Intake, Align to strategy & Ideate

Identify the business need, assess feasibility, and define high-level objectives

INITIATION
Build project charter

Project kick off , Refine project objectives, scope, and obtain approval to proceed

PLANNING & DESIGN
Plan – schedule, cost, resources

Develop detailed plans for project execution, schedule, and resources

EXECUTE
Deliver, inspect and adapt

Develop and deliver project outputs according to the plan

CLOSURE
Value realization

Finalize project deliverables, transition to operations, and evaluate project success

Project Management – Life Cycle & Stage Gates

	Discovery → Gate 1	Initiation → Gate 2	Planning & Design → Gate 3	Execute → Gate 4	Closure → Gate 5
	Identify business need, assess feasibility, and define high-level objectives as part of **Project Intake**	Develop the project charter and establish governance	Develop detailed plans for project execution, schedule, and resources with a finalized solution plan	Deliver project outputs as per the approved plan, ensuring alignment with scope and timelines	Finalize project deliverables, transition to operations, and evaluate project success
Key activities	▪ Identify business problem and define scope ▪ Assess feasibility ▪ High-level due-diligence/risk assessment	▪ Develop project charter ▪ Identify stakeholders, their roles & responsibilities ▪ Establish project governance structure and cadence	▪ Define solution architecture and design specifications ▪ Access Data readiness ▪ Engage Support team ▪ Define work breakdown structure ▪ Plan resources, dependencies.	▪ Build, configure, and integrate solutions as per design ▪ Conduct testing cycles ▪ Track progress, resolve issues, and manage scope changes	▪ Obtain stakeholder acceptance ▪ Transition solution to operations ▪ Capture lessons learned ▪ Close financials
Governance and stakeholder engagement	▪ Does the Business Case align with the business strategy? ▪ Is cost vs. benefits justified? ▪ Is funding identified or budgeted?	▪ Are alternative solutions evaluated ? ▪ Project Charter complete and justified? ▪ Impact assessment conducted? ▪ Cost vs benefits still justified ?	▪ Steering committee, working group, and stakeholder meetings established? ▪ Approve governance framework and communication protocols. ▪ Are Change's justified?	• Do open risks/issues mitigated or need support? • Are Change's justified? • Training and Change management on track for successful launch?	▪ Benefits realized and KPIs on track? ▪ Handover signed by operational owners? ▪ Are lessons learned documented ?
Deliverables/ outcomes	▪ Problem statement and Business case ▪ Stakeholder alignment and approval	▪ Project Charter and RACI matrix ▪ Defined governance cadence	▪ Solution design and architecture ▪ Change management plan	▪ Project status log ▪ Developed/tested solution components	▪ Signed-off deliverables ▪ Transition sign-off

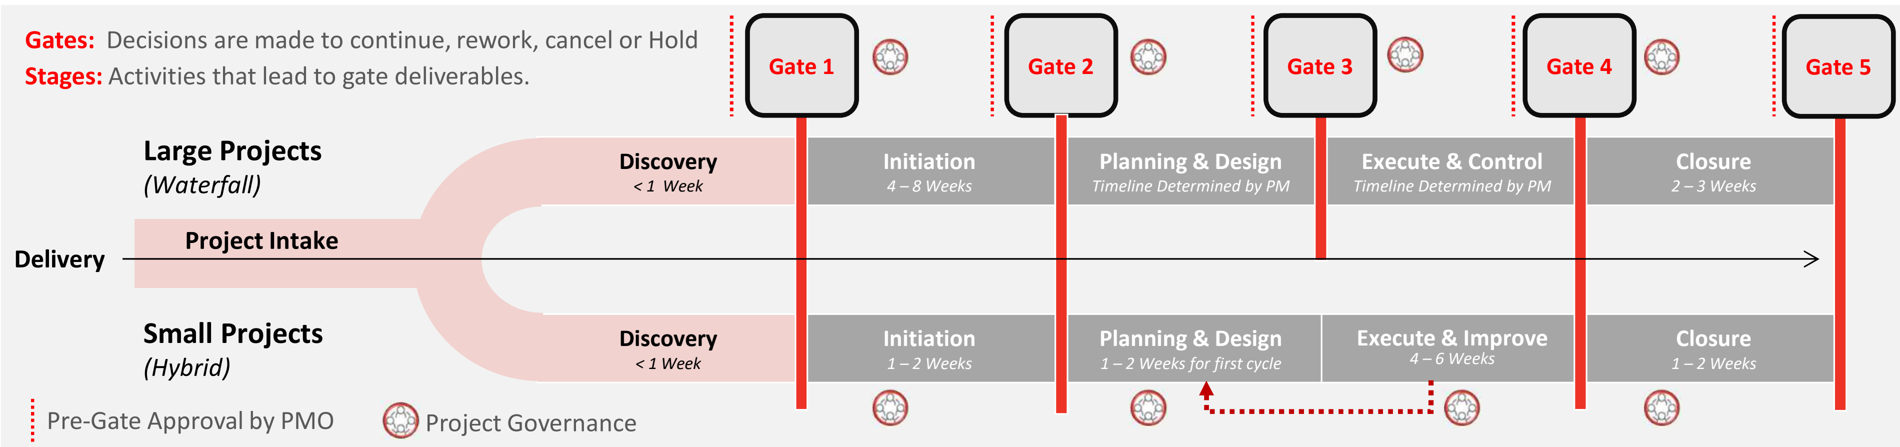
Large and Small Projects Approach



Large Projects	Small Projects
More specific documentation templates aligned with corporate standards	Less documentation but more real time management information available through digital tooling solutions
Success is measured through progress against plan and delivery of clearly defined project outcomes	Success is measured through ongoing monitoring of OKRs and user stories against burn down charts and velocity metrics

1. Both have stage gate reviews and health check sessions that are formal and structured, aiming to ensure the project is on track and that any issues or risks are identified and addressed before moving on to the next phase
2. Both require effective risk management to identify and mitigate potential risks
3. Both require effective resource management to ensure that projects are completed on time and within budget

Key Roles | Large vs Small Projects

Comparative view of roles and responsibilities in large-scale waterfall projects versus small hybrid initiatives

SMALL PROJECTS *(HYBRID)*

Project Lead / Scrum Master	Responsible for facilitating project meetings, removing impediments for the team, and serving as the main liaison between the IT department and project stakeholders to ensure smooth communication and delivery.
Product Owner	Responsible for defining the product vision, managing the product backlog, and prioritizing features to ensure the development team delivers maximum value aligned with business goals.
Subject Matter Expert (SME)	Provides specialized knowledge and expertise in a specific area of the project, ensuring accuracy, relevance, and alignment with industry or organizational standards.
Solution Architect	Designs and oversees the implementation of technical solutions that meet business requirements, ensuring they are scalable, secure, and aligned with the overall enterprise architecture.
Project / Scrum Team	Cross-functional group of professionals who collaboratively plan, develop, test, and deliver product increments in iterative sprints.

LARGE PROJECTS *(WATERFALL)*

Project Sponsor	The executive or leader with overall accountability for the project, typically responsible for securing funding and ensuring the project's success by providing strategic direction and support.
Steering Committee	Project governance focused on guiding strategic decision-making, aligning stakeholders, support removing obstacles and overseeing the successful execution of key objectives.
Project Manager	Individual responsible for planning, executing, and closing a project—managing the team, scope, timeline, and resources to ensure successful delivery of project goals.
Enterprise and / or Solution Architect	Responsible for designing the overall structure of technology systems, ensuring that the project's solutions align with enterprise-wide standards, strategies, and business goals.
Project Team	Internal and external group of individuals with specific roles and skills who collaboratively work to plan, execute, and deliver the project's objectives within the defined scope, time, and budget.

Governance | Small vs Large Projects

EXECUTIVE

PROJECT TEAM

SMALL PROJECTS *(HYBRID)*

Product / Release Review

Weekly

Agenda

- Showcase completed features & deliverables
- Review backlog and reprioritize
- Discuss release readiness and risks

Participants

Business SPOCs, Project Lead, Product Owner

Daily Stand-up

Daily

Objective

- Share Previous day's progress
- Discuss planned work for the day
- Flag blockers or dependencies

Participants

Project Lead/Scrum Master, Product Owner, SME, IT SPOC, Project Team

LARGE PROJECTS *(WATERFALL)*

Steering Committee Meeting

Biweekly(or Agreed frequency) and Stage Gate Approval

Agenda

- Discuss strategic alignment with business
- Review overall project progress and KPIs
- Discuss critical risks and issues
- Approve Gates and Change Requests
- Endorse cross-project dependencies

Participants

Sponsor, CIDO, Business SPOCs, IT SPOCs, Project Manager

Project Status Review

Weekly

Objective

- Review milestones and deliverable status
- Discuss open risks and issues
- Track budget and resource updates

Participants

Project Manager, Project Team, SMEs

Workstream Sync

Daily/Weekly

Objective

- Coordinate workstream activities
- Address blockers and assign actions
- Share progress and next steps

Participants

Work Stream leaders and team members.

Stage Gate Activity Matrix

	Workstreams					
Stage Gate	**Program Management & Governance**	**Requirement Gathering & Design**	**Data Management & Reporting**	**Build, Test & Quality Assurance**	**Deployment & Operations**	**Business Delivery & Change Management**
G1 - Discovery	- Define project approach & resourcing assumptions - Identify preliminary governance & stakeholders	- Gather high-level business requirements - Feasibility assessment - Impact assessment - Preliminary budget estimate	- Identify impacted data domains, systems & dependencies	*NA*	*NA*	- Identify business champions (SMEs)
G2 - Initiation	- Formal project kick-off - Establish governance cadence - Vendor/commercial engagement (*RFPs, demos*)	- Requirement workshops (*functional & technical*) - Gap Assessment - Finalize business process documentation - Solution design sign-off	- Conduct data readiness assessment	*NA*	*NA*	- Define initial change impact assessment - Identify key stakeholders for training & comms planning
G3 - Planning & Design	- Develop detailed resource plan - Initiate RAID log & risk register - Engage vendors & ITSM support	- Complete detailed design (*solution, processes, security*) - Draft system integration plan	- Data cleansing & conversion plan	- Define test strategy (*SIT, UAT, performance*) - Identify test environments & tools	- Draft cutover strategy - Draft hypercare & stabilization plan	- Prepare change mgmt. plan - Develop training strategy
G4 - Execute	- Oversight of execution progress (status, RAID) - Resolve cross-workstream risks/issues	- Validate solution against requirements (SIT/UAT) - Architecture & integration checkpoints	- Trial conversions & mock runs - Reconcile migrated vs legacy data	- Conduct SIT, resolve defects - UAT & sign-off - Performance & security testing	- Execute cutover & validate - Activate hypercare support	- Execute training - Deploy comms for launch - Confirm business readiness
G5 - Closure	- Budget reconciliation - Archive project documentation	- Validate all requirements delivered - Document deferred requirements	- Validate data migration / cleansing - Confirm reporting handover to operations	- Close hypercare defect fixes - Finalize release documentation	- Complete stabilization & transition to BAU support	- Measure benefits realization - Conduct adoption assessment - Close training & feedback loop

Stage Gate Deliverables Matrix

	Workstreams					
Stage Gate	**Program Management & Governance**	**Requirement Gathering & Design**	**Data Management & Reporting**	**Build, Test & Quality Assurance**	**Deployment & Operations**	**Business Delivery & Change Management**
G1 - Discovery	- Intake Form - Cost & Resource Estimate - Business Case	- BRD Document - Solution Outline	*NA*	*NA*	*NA*	*NA*
G2 - Initiation	- PRB Form - Project Cost Estimates - Resource Plan - Project Charter	- Detailed Requirements - Traceability Matrix - Plan on a Page - RACI Matrix	*NA*	*NA*	*NA*	- Change Management Plan
G3 - Planning & Design	- Project Plan with Timelines - Communication Plan - RAID Log - Change Control Documents	- Detailed Requirements & Component-level Solution Designs	*NA*	- Test Strategy & Approach	- Cut-over Plan - Post-Go-Live Support & Stabilization Plan	- Training Plan
G4 - Execute	- RAID Tracker	- Configuration / Build Completion Report	- Data Migration & Validation Reports	- SIT & UAT Test Reports - Test Execution & Sign-off Report	- Cutover & Deployment - Execution Report - Deployment / Release Note	- Business Readiness & Training Materials - Business Readiness Confirmation
G5 - Closure	- Post-Implementation Review - Formal Project Closure Approval - Lessons Learned document	*NA*	*NA*	*NA*	- Operations Handover Document (*signed by receiving team*)	- Stakeholder Feedback Report
