ELGI SAUER : AI Workshop

What AI is, where it helps, and how to choose the right tool — with live demos

V1.0

AGENDA: learn a little, see a lot, try one thing

Time	Block	What you will do
0:00 – 0:10	Warm-up	Quick show of hands: how we use AI today
0:10 – 0:20	AI 101	How it works, what it is good and bad at, how to ask
0:20 – 0:40	Use cases	Ideas by function, then find your own in teams
0:40 – 1:10	Live demos	M365 Copilot, Claude, and AI on a phone at the machine
1:10 – 1:40	AI at ELGi today	Power BI Copilot, RCA Assistant, MINT and more
1:40 – 2:00	Q&A	Closing Comments

Where are we today?

1

You have used ChatGPT or Claude in the last week

2

You have used Copilot inside Outlook, Teams or Excel

3

AI has given you a confident answer that turned out wrong

4

You have used AI for a drawing, a machine or a shop-floor problem

AI 101 | THE WORDS PEOPLE USE

01

Artificial Intelligence

Machines doing tasks that normally need human judgement

e.g. a camera that rejects a bad weld

02

Machine learning

Learns patterns from past data to predict what comes next

e.g. forecasting spares demand

03

Generative AI

Creates new text, images or code from a plain-language request

e.g. drafting a work instruction

04

AI agents

Generative AI that uses tools and takes steps on its own

e.g. pulling past RCAs and drafting a QC story

ChatGPT, Claude and M365 Copilot are all **generative AI** — and are quickly becoming **agents**.

Think of it as a brilliant new apprentice

A large language model has read a huge slice of the world's text. It answers by **predicting the most likely next words** — very, very well.

Try finishing this sentence:

"Before starting the compressor, always check the oil…"

That is all it is doing — at huge scale.

What the apprentice brings

- Has read almost everything, writes fast, never tires
- Explains, drafts, summarises, translates

What it does not know

- ELGi's drawings, specs and history — unless you give them
- When it is wrong — it can sound sure and still be wrong

Great at drafts and thinking — careful with facts

Great at

- Drafting emails, SOPs, reports and work instructions
- Summarising long documents and meetings
- Explaining a standard, an error code or a concept
- Brainstorming possible causes and options
- Translating — English, Tamil, Hindi, German
- Analysing a table or sheet you give it

Be careful with

- Exact numbers it was not given — it may invent them
- Latest information, unless it can search
- Safety or quality decisions without human sign-off
- Confidential data in personal accounts
- Heavy maths on big data without a proper tool
- ELGi-specific specs and standards it has never seen

Brief it like you would brief a new colleague

Role

Who should it act as?

Task

What exactly do you want?

Context

Facts, files, examples

Format

Table, steps, length, language
language

EXAMPLE PROMPT

You are a quality engineer in a compressor plant. Draft a work instruction for torqueing the [component] mounting bolts. Use: torque [__ Nm], cross-pattern sequence, tool [__]. Write numbered steps a new operator can follow, safety note first, under 150 words, then repeat it in Tamil.

Then keep talking: **"make it simpler"**, **"what did I miss?"**, **"ask me questions first"**.

Use Cases by Function

Where AI can help each of our teams

Design

- Compare spec revisions and list every change
- Starter DFMEA from past failures
- Search standards in plain language
- Draft test reports from test data

Production

- Shift handover summaries
- Explain an alarm and its likely causes
- Draft and translate work instructions
- Find top losses in a downtime log

Operations

- Supplier emails and follow-ups
- Summarise long RFQs and contracts
- Excel formulas, pivots and variance notes
- Meeting minutes and action tracking

Shop floor

- Ask by voice, in Tamil or Hindi
- Photo of a defect: possible causes and checks
- Safety checklists in simple words
- Translate manuals and labels

Which one of these would save you the most time this month?

EXERCISE · 10 MINUTES · IN YOUR TEAM

Find your first AI use case

1. List three tasks that eat your time every week
2. Pick one that is **repetitive**, **text- or data-heavy**, and **low-risk** if the first draft is wrong
3. Fill in the card on your table
4. We will try two or three of yours **live** in the demos

USE-CASE CARD

Team: _____

Task: _____

How often / hours a week: _____

Where the data lives: _____

What "good" looks like: _____

LIVE DEMO : M365 Copilot

Copilot works where your work already is

Why it is different

It reads **your** Outlook, Teams chats, meetings and files — only what you already have access to.

No copying and pasting. It lives inside inside the apps you open every day. day.

TEAMS

"Recap the [meeting] meeting. What was decided, and who owns each action?"

OUTLOOK

"Draft a reply to [supplier] confirming the new delivery date — polite but firm."

EXCEL

"Which three machines had the most downtime last month, and why? Show a chart."

WORD

"Turn these handover notes into a one-page shift report."

Confidential. For Internal Circulation Only | Copyright © ELGI EQUIPMENTS LIMITED 2025 | All Rights Reserved

LIVE DEMO : Claude

Claude for long documents and hard thinking

Why it is different

Reads very long files at once and reasons through them step by step.

It can also **build** things — checklists, calculators, small apps — from a sentence.

COMPARE

"Here are rev C and rev D of [spec]. Table every change: clause, old, new, impact on production."

REASON

"Here is a field failure and our last three RCAs. Run a 5-Why and list the evidence for each cause." each cause."

BUILD

"Build a daily machine start-up checklist operators can tick on a tablet, in English and Tamil." Tamil."

ORGANISE

Projects: keep a team's specs and SOPs in one place, so every chat starts with context.

AI AT ELGI TODAY

IN USE

Power BI Copilot

Ask sales and S&OP dashboards questions in plain English

WIP

RCA Assistant

AI-guided root cause analysis and QC stories

LIVE

MINT meeting notes

Teams transcripts become summaries with decisions and actions, emailed automatically

WIP

Sales Copilot

Sales teams ask questions answered from ELGi's own product decks, inside Teams

PILOT

Demand forecasting

Statistical and ML forecasts feeding S&OP planning

Using AI Well

AI drafts. People decide.

Do

- Use ELGi-approved tools and accounts
- Give context, examples and the format you want
- Check numbers, specs and names before you use them
- Keep a person accountable for every decision
- Share prompts that work with your team

Don't

- Paste customer, pricing, drawing or personal data into personal accounts
- Let AI sign off safety, quality or release decisions
- Trust a figure you cannot trace to a source
- Assume it knows ELGi's standards
