Assignment

Assignment description: This dataset contains sales data for a fictitious company called XYZ Traders, which imports and exports specialty foods from around the world. Details of the provided tables are as below:

1. Categories - list of product categories.
2. Products - the products XYZ Traders buys and sells.
3. Customers - buyers of XYZ Traders products.
4. Orders - information about each order such as the customer who placed the order, employee who handled the order, order, and shipment date, which shipper made the shipment, and so on.
5. Order Details - transaction details of each order such as products, unit price, quantity, and discount applied.

Problem statement: Load the data in the Power BI Desktop and perform the below tasks:

1. Get data from the data set attached in LMS.
2. Load all tables (excels) data in Power Query Editor for data transformation.
3. Remove the last remarks columns from each table (where required). Make sure any key column is not removed. Promote the headers in the required tables.
4. Find out which columns contain Null values. And replace Null by N/A or 0 depending on the data type of that column.
5. Add Product Name column in **Order_Details** table using Merge query.
6. Using the **OrderDate** column from the **Orders** table: Create columns for Year, Quarter, and Month Name.
7. Remove the **Required_Date** column from the **Orders** table.
8. Make sure **Data_Types** of columns are correct.
9. Load this transformed data in Power BI Desktop.
10. Create the required table relationships.
11. Create a **Calculated** column for "Shipment Days" (Order Date – Shipped date).
Note: Use DATEDIFF () function.
12. Create another calculated column for "Ship Via Description".

Note: In the 'ShipVia' column, Encode 1 as Land Shipment, 2 as Water Shipment and 3 as Air shipment

13. Calculate "Sales Amount" into a measure.
14. Calculate "Total orders count" into a measure.
15. Display the measure results using a card visualization.
16. Save your report/file with the name as **Assignment_Module#_YourName**.
Submit the file to the edureka support team through the submit button present on the LMS
